Dear Ann,

Thank you for letting me know. I appreciate that with Lizzie leaving it needs to come from someone at the school.

Limpsfield CE Infant School would like to express their thanks for your generous grant last year. This enabled us to create our sensory reflection garden at Limpsfield. The space has become a much-loved part of our school and is used daily by children for quiet reflection, emotional regulation, outdoor learning and wellbeing. It has been particularly beneficial for our children with additional needs, and your support has made a genuine and lasting difference to our school community.

Following the success of this project, We are writing to ask whether the Parish Council would consider supporting us with a second small grant to further enhance our outdoor provision by developing a children's biodiversity garden.

Our aim is to create a hands-on learning environment where pupils can explore nature, understand local wildlife, learn about sustainability and develop a sense of responsibility for the environment. The garden would support our Science curriculum, Eco Council projects and outdoor learning, while also providing opportunities for children to experience the wellbeing benefits of spending time in nature.

We also hope to work closely with our school kitchen as part of the project by composting suitable fruit and vegetable waste from meal preparation and using this to enrich the garden. Alongside this, we plan to grow herbs and seasonal salad produce that can be harvested and used in school lunches where appropriate. This will help children understand the journey from garden to plate while encouraging healthy eating, reducing waste and promoting sustainable practices throughout the school community.

The attached list outlines the resources we hope to purchase, including children's gardening tools, watering cans, wildflower seeds, a compost bin, water butt, bug hotel, bird boxes and other wildlife-friendly features. The total cost of the project is approximately **£241**.

As with the reflection garden, this project would become a lasting resource for the whole school and would benefit children for many years to come. We are committed to maintaining and developing the space with the help of pupils through gardening clubs, Eco Council and curriculum activities.

We appreciate that there are many worthwhile causes seeking support, but if the Parish Council felt able to contribute towards this project, we would be incredibly grateful. Your generosity last year has already had a significant and lasting impact on our pupils and we would be delighted to continue building on that

impact on our pupils, and we would be delighted to continue building on that success.

Thank you very much for considering our application. I would be happy to provide any further information if required.

Many Thanks

Megan Cunningham
